

ROBOT ARM REPLACEMENT

ROBOTIC PALLETIZERS

While Columbia/Okura robot arms are built to last and many older-generation models still operating well, robot arms that were installed 15+ should be replaced. Replacing an arm is more cost-effective than buying an entirely new system. Whether you're upgrading to achieve a faster palletizing rate or to prevent possible downtime, with an upgrade to your robot arm your production line will realize many benefits.

- « Spare OEM parts availability
- « Remote support capabilities and easier in-person service
- « Cost efficiency in upgrading a robot arm rather than entire systems
- « Improved speed and performance
- «

ADDITIONAL EQUIPMENT UPGRADES

Replacing a robot arm is only one component of your system and we can support with retrofitting your entire system if required. As facilities grow, other peripheral equipment can be added such as pallet dispensers, additional conveyors, or automatic sheet dispensers.

Let us help you optimize your system.

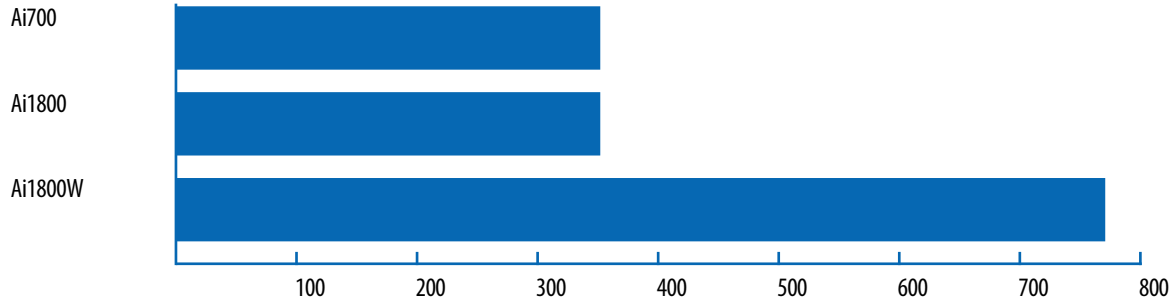

From custom-engineered solutions to complete integration to ongoing support, you can count on Columbia/Okura LLC to support your growth and success as if it were our own.

We're committed to maintaining a long-lasting, collaborative partnership focused on meeting your unique needs.

We believe in the transformative power of automation.

SPECIFICATIONS

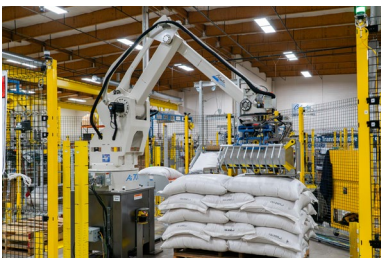

WHEN TO RETROFIT

The primary reason to upgrade to a current robot model is to ensure continued technical support and reduce or prevent downtime. With parts for older models getting harder to find, there is a risk of longer, unplanned downtime events. Additionally, as your business grows your palletizing system should be upgraded to continue to meet production needs.

WHAT TO RETROFIT

Often a simple arm replacement will fulfill the needs of a production facility; providing upgraded software, improved product handling, and easier servicing. In other situations, a retrofit to peripheral equipment, including adding additional equipment or production lines may be needed. Our custom approach will ensure the best end of line system for your facility.

TRADE IN YOUR ROBOT ARM

In an effort to be as sustainable as possible, we offer a discount on robot arm replacements if you trade in your older generation robot. While not all robots can be recycled, many components can be reused or disposed of in an environmentally friendly way through our replacement program.

Columbia/Okura is proud to offer a trade-in program for any obsolete spare parts following the installation of the new robot.
